

RE: Polylast SurfaceGuard™ with Microban® Antimicrobial as a sole source

Polylast Systems, LLC has a patented process of combining proprietary U.S. primers, binders, and rubber that has allowed Polylast Systems' surfaces to endure as no other surface has. Polylast was developed for livestock use, so the strength and durability has been proven in both laboratory and field testing.

In addition to the patented process, Polylast Systems, LLC has an exclusive surface system agreement with Microban®, the global leader in antimicrobial product protection. The Polylast SurfaceGuard™ with Microban® Antimicrobial product is guaranteed to inhibit the growth of damaging microorganisms, while fighting the proliferation of pathogens that humans and animals can encounter daily.

Polylast Systems surface solutions help prevent bacteria, mold and mildew, while reducing odors and stains, and help keep surfaces cleaner longer between washings. There are no other surface solutions equal to Polylast.

Polylast Systems surfaces solutions have been in use in many extreme duty facilities such as WestWorld, City of Scottsdale, AZ, University of Oklahoma, Colorado State University, Purdue University, USDA - National Animal Disease Center, and hundreds of other private and public facilities.

Here are several reasons why there are no other products "equal" to Polylast:

- Polylast is the only company capable of producing this product
- Exclusive surface system agreement with Microban® antimicrobial
- Microban® antimicrobial product protection for the life of the surface
- Patented process of encapsulating rubber during manufacturing
- Reduces livestock leg impact concussion and shock by 40-50%
- Vehicles and heavy equipment drive on Polylast surfaces every day without damage
- Designed specifically for livestock comfort, safety and enhanced performance
- 10 Year Warranty, under the weight of livestock, large animals, and machinery

Please see the Polylast Information Kit for some notable installations, references and actual photographs taken of bacteria virtually unable to grow on or around the Polylast surface.
