

## FAST INSTALLATION

Polylast Bunker Liners are prefabricated and delivered ready to lay, only requiring placement of the preformed pads, the seams of which may be stapled and glued together. From start to finish, bunkers of 1,000 sq. ft. or more can be installed, and ready for sand and play in about an hour.

## SEAMLESS EDGES

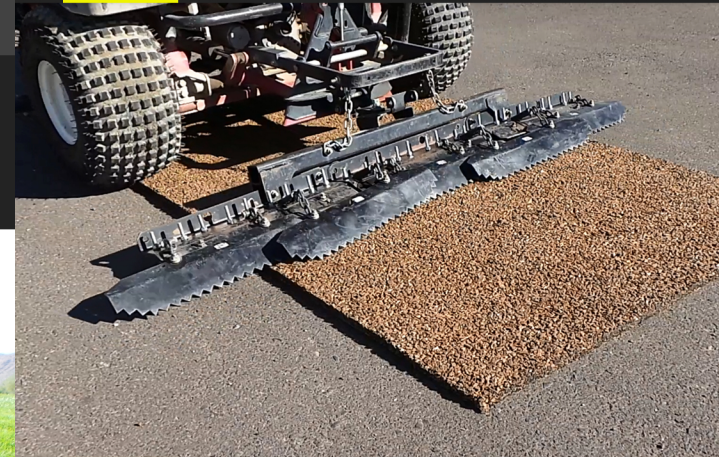

Polylast Bunker Liners are thin enough that they can be placed under the turf at the edge of your bunker, creating a seamless edge while allowing the turf to thrive.

## SERIOUSLY DURABLE

Polylast Bunker Liner's are strong enough to withstand the weight of maintenance equipment, animals, cleats, the impact of the worst golf strokes, nearly everything and anything you can throw at it. Including the abuse of a machine rake.

## THIN AND FLEXIBLE

Polylast Bunker Liners are thin & flexible, allowing them to easily contour to the grade, curves, and dips of your bunker, simplifying preparation.

## MOISTURE DISTRIBUTION

Polylast Bunker Liner's allow water to flow through freely, while keeping the sand in the trap.
