

POLYLAST BUNKER LINERS

Polylast™ Bunker Liners are a revolutionary bunker enhancement system that improves the flow of water through your bunkers to your drain system helping to prevent flooding and washout while protecting your sand from migrating rocks and dirt from the native subsurface.

All Polylast™ Bunker Liners are hand formed with 100% recycled rubber and proprietary urethanes with a patent protected process (US Patent number 8,389,624 B2 issued March 5, 2013). The bunker liner is prefabricated and delivered ready to install, it only requires placement of the preformed pads, the seams of which may be stapled and glued together. Polylast™ Bunker Liner is ideal for any size bunker... from small pot bunkers to large bunkers, A typical 1000 square foot installation takes about an hour, from start to sand! Not only will you find that Polylast™ Bunker Liner's are designed to be the BEST solution for golf course challenges, but the least expensive system, too!

Prefabricated in Scottsdale, AZ, by well paid retired veterans, you're not only doing good for your facility, you're helping to set an important precedent.

MANY APPLICATIONS

The same material that Polylast Bunker Liners are made from, can easily be applied to other locations on a golf course.
