

RUBBER FLOORING SYSTEMS FEATURING PROACTIVE ANTIMICROBIAL TECHNOLOGY

ADVANCED PRODUCT PROTECTION FOR CLEANER FLOORING SOLUTIONS

Polylast Systems is proud to provide the best rubber floor available. Whether it is horse flooring, golf course bunker liner, restaurant kitchen flooring, roadway repair, or any other application where a resilient floor is needed, Polylast will provide the best non slip floor. This patented and proprietary non slip floor is made from 100% recycled rubber combined with U.S. primers, binders and finishes, and is made right here in America.

Plus, many Polylast flooring systems include built-in Microban antimicrobial technology to provide antimicrobial floor applications that remain cleaner for longer. The technology will not wash off or wear away and remains active for the life of the product.

There has never been a surface solution that offers the benefits of Polylast™.

PROTECTION BEYOND WHAT YOU CAN SEE.

Microban International is the global leader in built-in antimicrobial product protection that helps prevent problems before they start. The innovative technologies are seamlessly incorporated into our manufacturing process to reduce the growth of stain and odor-causing bacteria on our flooring systems.

On an unprotected surface, bacteria can double in number every 20 minutes. Microban® Antimicrobial is infused into Polylast during the manufacturing process to help prevent the growth of damaging bacteria, as well as inhibit stains and odors caused by bacteria, on the rubber floor.

A PROVEN TRACK RECORD OF SUCCESS.

Microban technologies can be found in thousands of products made by hundreds of trusted manufacturers around the world, including both consumer and commercial applications. With more than 30 years of experience in the built-in antimicrobial industry and a team of scientists and engineers on staff, Microban's expertise is unmatched. For this reason, manufacturers

in the building category continue to select Microban technologies to make products more durable and longer lasting, so their customers can get the job done right the first time.

Microban technology for Polylast Flooring Systems is registered with the Environmental Protection Agency (EPA) specifically for its use in rubber flooring.

FREQUENTLY ASKED QUESTIONS:

What is Microban antimicrobial product protection?

- Microban technology is built-in antimicrobial protection that gives solid products, coatings and fibers an added level of protection against microbes, such as stain and odor causing bacteria, mold and mildew.

Does this mean I don't have to clean my products as often or as carefully?

- No. Microban antimicrobial protection continuously inhibits the growth of microbes to make foodservice products easier to clean and keep them cleaner and fresher between cleanings. Microban protection does not protect users from foodborne illness and is not a substitute for normal cleaning practices.

Does Microban antimicrobial protection begin working immediately?

- Microban protection begins to work as soon as the microorganism comes into contact with the product surface. It then works continuously to maintain a consistently lower bio-burden than would be expected on a product without Microban protection.

What types of microorganisms does Microban protection work against?

- Microban antimicrobial protection is effective against most common bacteria, mold and mildew that cause stains, odors and product degradation.

How do I know that Microban antimicrobial product protection is safe to use?

- Microban technology has undergone extensive independent laboratory testing and has a long history of safe use. It is registered with the EPA and other regulatory agencies in other countries for all applications in which it is used. Microban additives can be found in leading consumer and industrial brands around the world.
